

# YIELDFLOW

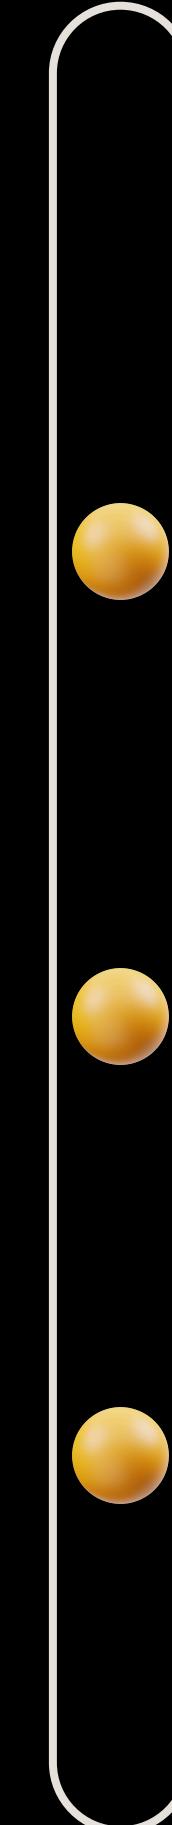

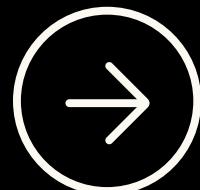

**YIELDFLOW LETS YOU EARN REWARDS ON YOUR SOL AUTOMATICALLY.**

**JUST CONNECT YOUR WALLET, DEPOSIT SOL, AND WE AUTOMATICALLY HANDLE STAKING, CONVERTING REWARDS TO USDC, AND SENDING PAYOUTS TO YOU.**

# **PROBLEM:**

## **MANAGING LIQUID STAKING ON SOLANA IS COMPLICATED AND MANUAL.**

**Users have to stake SOL, track rewards, swap them to stablecoins, and manage payout timing – all across different protocols.**

93.5% of staking participants prioritize liquidity and self-custody, yet current solutions often require manual reward tracking, swapping, and payout management.

71.9% of institutional participants express concerns about liquidity when staking, highlighting the need for more accessible and automated solutions.

64% of stakers report frustration with manual processes like reward tracking, swapping, and payout management, signaling demand for automation.

# EXISTING PLAYERS SOLVING IT PARTIALLY

## FRAx FINANCE

- Limited Solana support
- Complex reward management
- No automatic yield payout

## LIDO FINANCE

- Centralized staking
- No USDC payout option
- Lower liquidity options

## ROCKET POOL

- Ethereum-focused
- Complex user experience
- No stablecoin reward payouts

## ANKR

- Poor Solana integration
- Inconsistent yield payouts
- Centralized infrastructure

# HERE'S HOW OUR APPROACH STANDS OUT

Fully automated staking, reward tracking, and USDC payouts.

Built natively on Solana with Marinade and Jupiter integration.

User-controlled, non-custodial staking with flexible yield frequency.

# SIZE OF MARKET

Understanding our market helps us target early traction.  
Over \$586B is staked across crypto – with \$10–15B on Solana alone.  
We're starting with Solana-native users who want non-custodial, automated USDC rewards – a reachable \$100–300M market.

# WHY NOW?

## Mature DeFi Ecosystem

The DeFi ecosystem has matured with established protocols and liquidity, offering a stable foundation for growth.

## Blockchain Scalability

Blockchain networks like Solana enable fast, low-cost transactions, making liquid staking more efficient.

## Mainstream Adoption

DeFi is gaining traction with both retail and institutional investors, presenting a massive market opportunity.

## Cross-Chain Compatibility

Cross-chain technology allows seamless staking across multiple blockchains, broadening platform's reach.

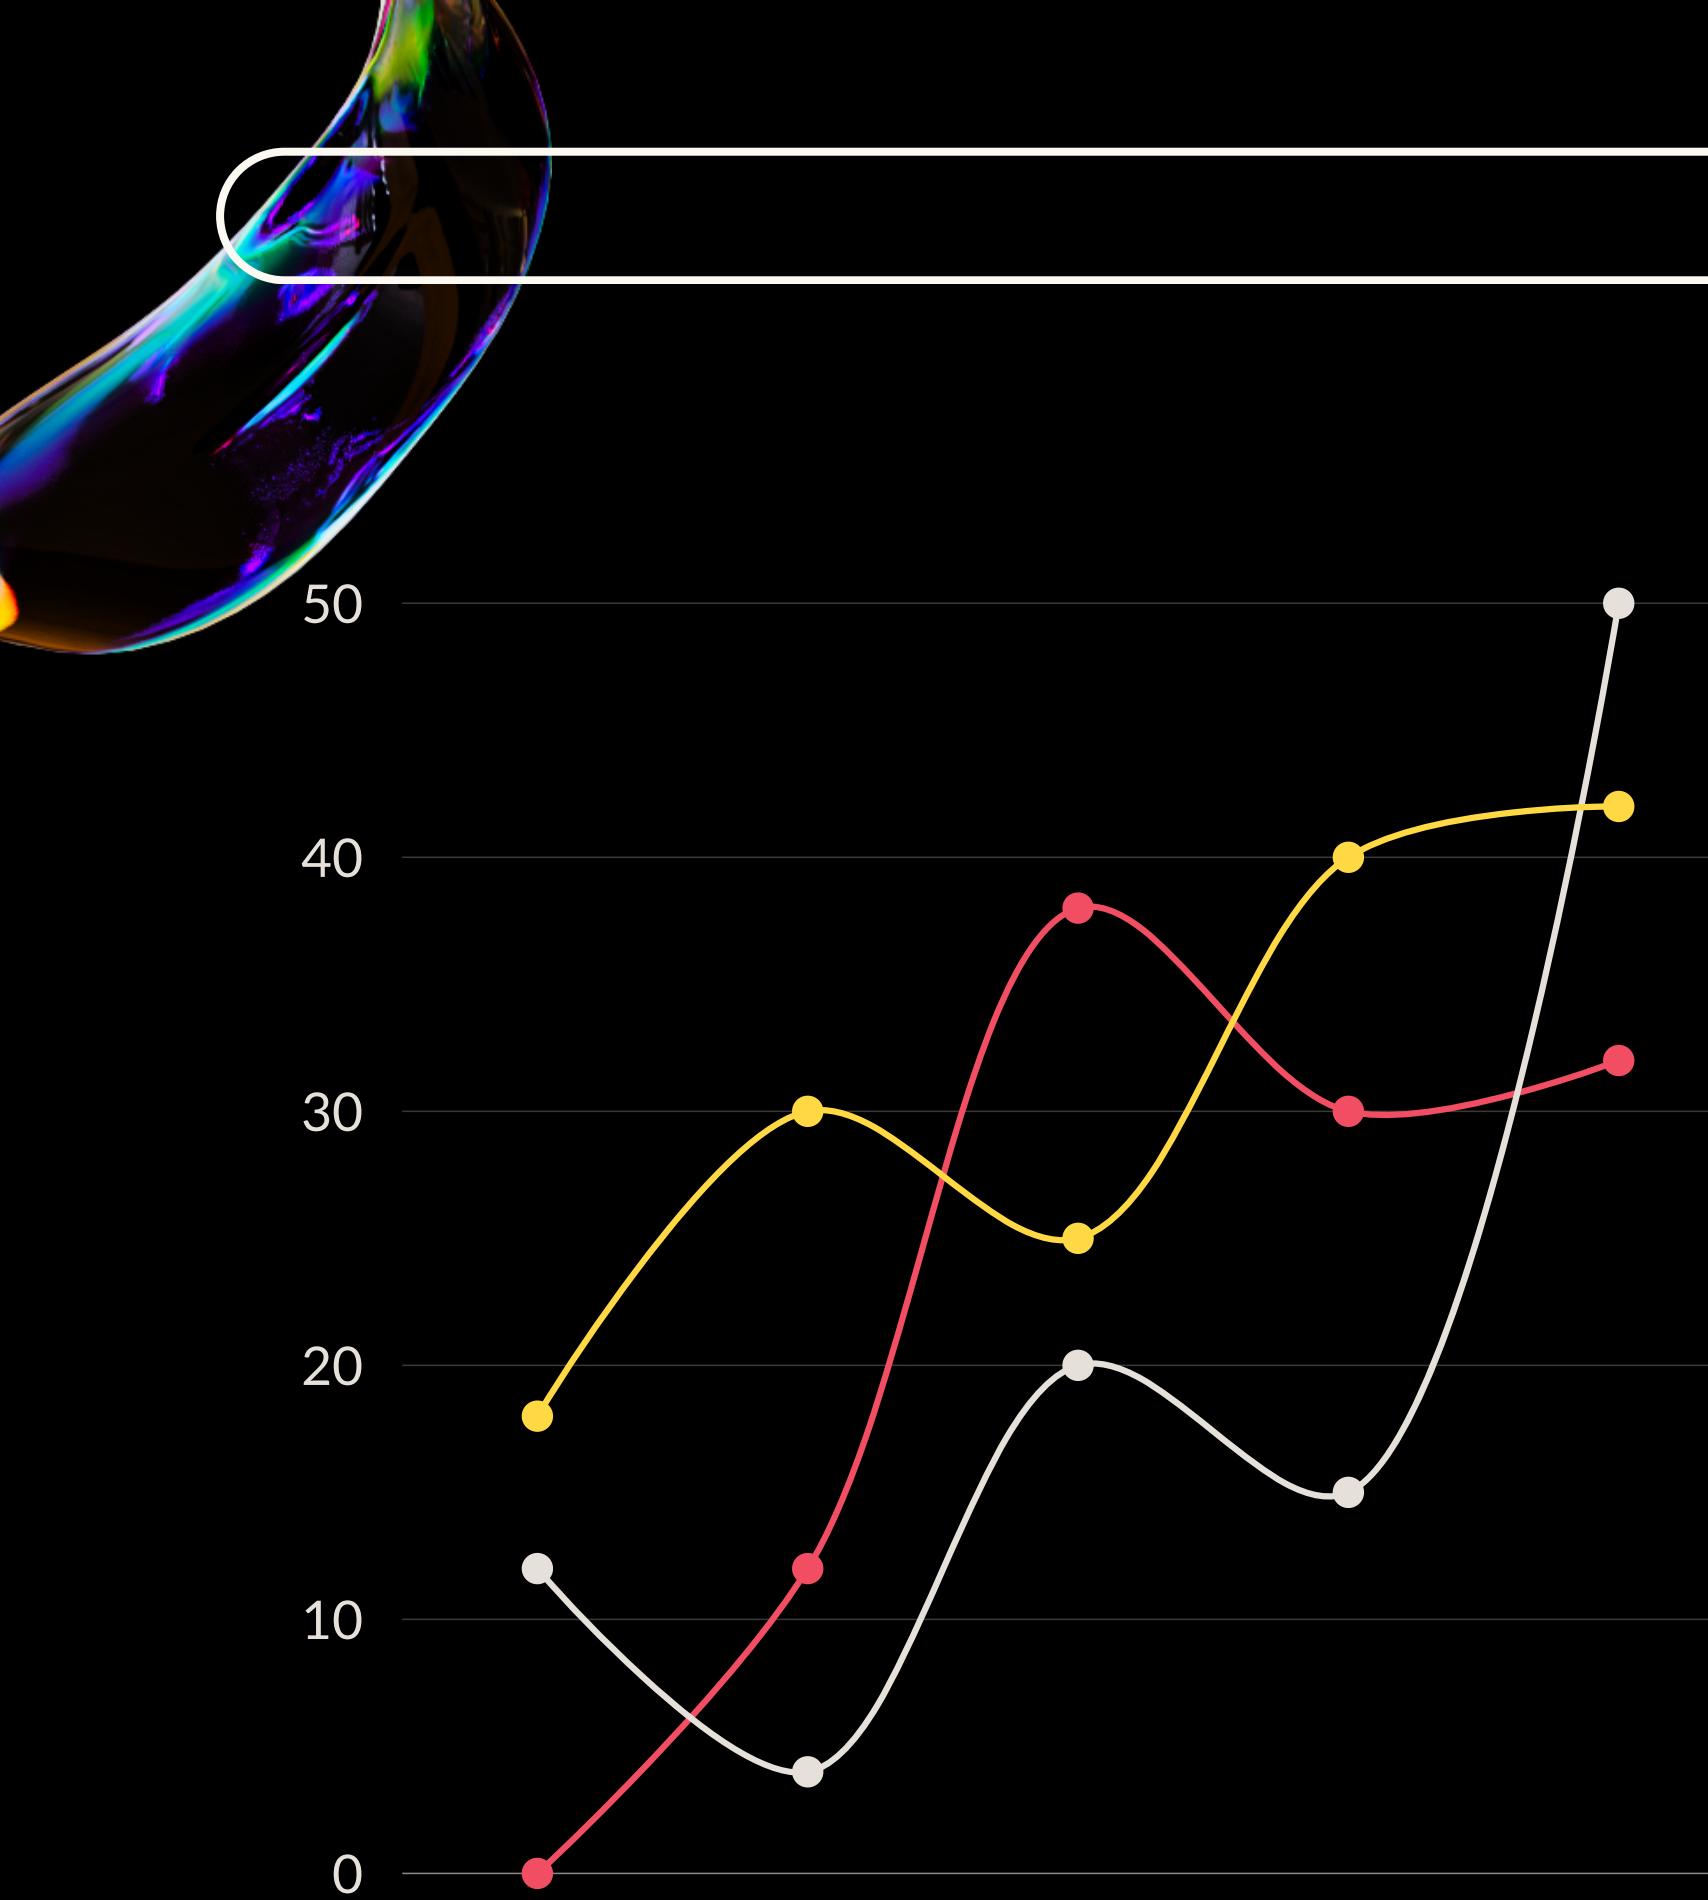

# REVENUE MODEL

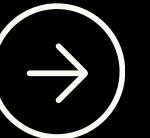

Our platform earns money by charging a small fee every time someone uses it to stake or withdraw their crypto. The more money you move, the lower the fee becomes.

Fee Range: Typically 0.2% to 0.5%, but larger transactions get lower fees.

For example, a \$1,000 transaction may have a 0.5% fee, while a \$10,000 transaction could have only a 0.2% fee.

# PLANS

## Present

- Designed core architecture and user flow.
- Built frontend and backend foundations.
- Integrated Jupiter; debugging Marinade integration.
- Close to be ready USDC payout via Sandglass.

## 2025 (short-term)

- Launch MVP on Solana mainnet
- Integrate full staking-to-payout flow (SOL → mSOL → USDC → user)
- Onboard 500+ early users and gather usage data
- Implement flexible reward frequency and manual payout triggers

## 2026

- Support more LSDs (Lido)
- Add portfolio dashboards and institutional tools
- Form partnerships with wallets
- Begin and expand monetization through premium features or staking fee share

## 2027

- Launch cross-chain staking dashboard (e.g., Ethereum, Cosmos)
- Expand to institutional clients with APIs
- Automate tax-friendly reporting and compliance tools
- Target 40k to 50k active users.
